

PAVLO PUZIK

Washington, WA | 253-314-3519 | US Citizen | pavlopuzik@gmail.com | Portfolio: <https://pavlogitscode.github.io>

PROFILE STATEMENT

Computer Science major with a strong interest in systems programming and low-level software development. I use Linux as my primary operating system and focus on building personal projects that deepen my understanding of operating systems, networking, and system-level programming. I primarily work with C because I enjoy understanding how software interacts with the operating system and hardware at a lower level.

EDUCATION

University of Washington

Tacoma, WA

Undergraduate

Expected Graduation: 2026

Major in Computer Science; Minor in Business and Data Analytics

RELEVANT COURSEWORK / PROJECTS

NetScan: Linux C network scanner using ARP, libpcap, and OUI lookup to discover local IPv4 devices.

CLI File Checker: C CLI that identifies file types by magic bytes and compares files with SHA-256 hashes.

Hex Converter: C tool for binary, decimal, and hexadecimal conversion with input validation.

GigFlow: Full-stack event marketplace built with a 4-person team at a hackathon; used React, FastAPI, PostgreSQL, and SQLAlchemy to deliver event discovery, messaging, and vendor workflows.

Pavterm: A terminal emulator written in C and built using the SDL3 library which uses PTY's (Pseudo-Terminal) to talk to a shell.

SKILLS

Programming: C/C++, Java, Python, SQL, Tableau, JMP

Systems / Networking: Linux, Git, Makefiles, CLI tooling, socket programming, ARP, libpcap, SHA-256

Coursework: Data structures, algorithms, object-oriented design, software development, computer architecture, Computer Graphics

WORK EXPERIENCE

Amazon AMXL

Sumner, WA

Process Guide

Sep 2021 – Present

- Led troubleshooting and process improvements across physical and virtual workflows to improve inventory accuracy, safety, and handoffs.
- Trained associates and managers on repeatable workflows, translating operational procedures into clear steps.
